

# E by SIPLACE

## E-Flex: For flexible performance

Our Flex configuration with 240 slots consists of two E by SIPLACE equipped with one **CP14** head and one **CP12/PP** head.

This solution gives you the flexibility you need to handle an exceptionally wide range of market requirements. It features a new level of flexibility for mass production or prototype production, lots of performance, and plenty of slots for the efficient production. And as always with SIPLACE, each process around the line is supported by solid, user-friendly software.

**Tell us what you need  We will find the right configuration for you**

Basic, Flex and Volume are popular configurations that cover the majority of common applications. Electronics production is diverse, however, and constantly changing.

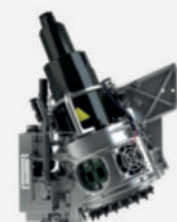

Discuss your needs with your E-team  they will gladly help you to find your ideal E-configuration.
